

## Kong Enterprise

# Take control of your APIs across any environment

Kong Enterprise is the fastest, most feature-advanced, and secure API management solution built on Kong Gateway — the world's most adopted API gateway.

Modernize legacy applications, deliver outstanding digital customer experiences, and accelerate your time to market — with enterprise plugins, developer portal, analytics, advanced security, user interface, and 24/7 production-ready support.

## Unleash developer productivity — and your organization's potential

Strip away tedious dev tasks, and reap the rewards of developer-driven innovation.

- Provide APIs as a product to internal and external teams to locate, access, and consume through the customizable Developer Portal.
- Add functionality to APIs and services with a wide range of out-of-box [plugins](#) and boost developer efficiency.
- Avoid configuration drift by enabling declarative configuration and remove manual coding tasks by integrating all service types into existing CI/CD pipelines.
- Streamline developer onboarding process with Role-Based Access Control (RBAC).
- Integrate with [Kong Insomnia](#) to accelerate development of REST, GraphQL, Kafka, and gRPC services, increase collaboration, and standardize processes across teams.

CONSISTENT API SPECS AND DOCS

## Centralize and simplify management

Deliver connected digital customer experiences across clouds, platforms, and protocols. Our API management solution gives you one platform for bare metal to cloud native, monolith to microservices, mesh and beyond.

- Kong Enterprise works with emerging and legacy technologies, supporting multi-cloud, hybrid cloud, and on-prem and Kubernetes and VM-based deployments at scale.
- Natively support gRPC and REST, WebSockets and integrate with Apollo GraphQL server and Apache Kafka services.
- The elegant Kong Manager interface and simple one-click operations make managing and monitoring services across your entire organization easy.

## Simplify API security and governance

**Ideal for air-gapped deployments. Easily apply API security best practices, and speed up delivery without sacrificing on security and compliance.**

- Empower development teams to consistently apply fine-grained security and traffic policies via plugins including mutual TLS, OpenID Connect, Open Policy Agent, OAuth 2.0, and many more.

Kong Enterprise is self-managed and features a FIPS 140-2 compliant gateway, making it ideal for highly regulated industries with strict compliance and security considerations.

- Get out-of-the-box support for third-party secrets managers, such as AWS Secrets Manager and Hashicorp Vault, for centrally managing and storing secrets.

Basic authentication

Rate Limiting with more flexibility and higher performance

Install

Kafka Upstream

Transform requests into Kafka messages in a Kafka topic

Install

GraphQL Proxy Caching Advanced

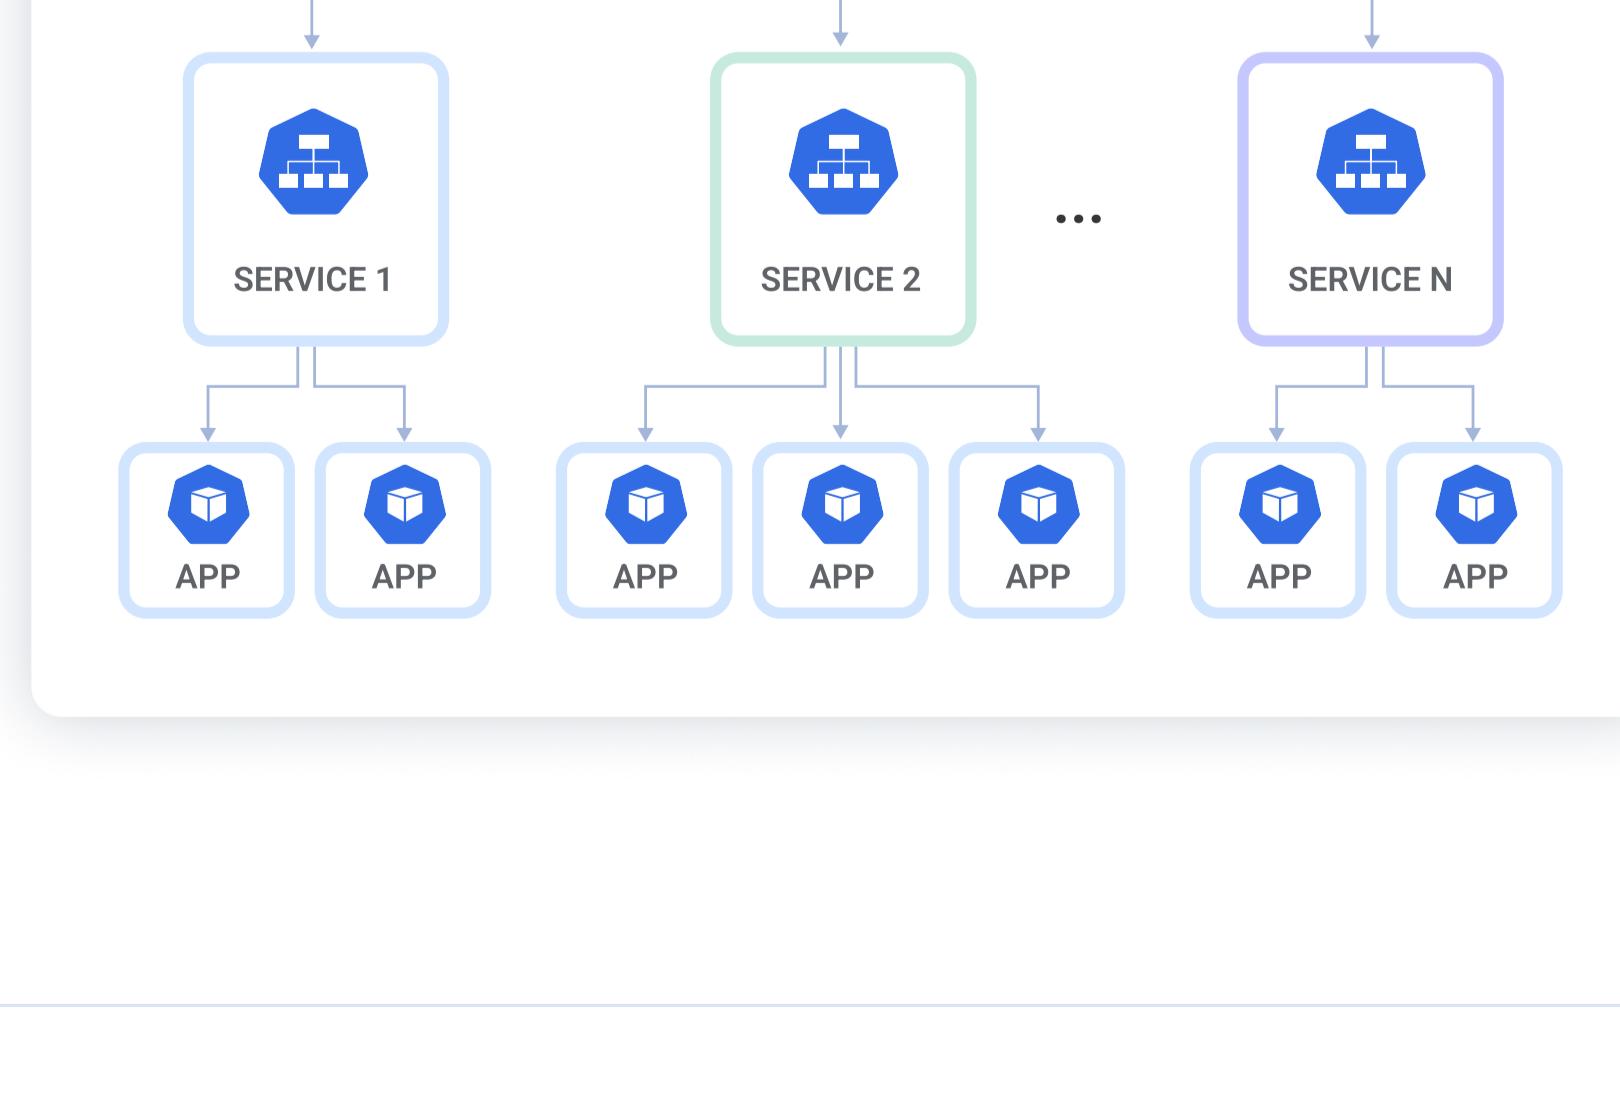

Cache and serve commonly requested responses in Kong

Install

Mocking

Provide mock endpoints to test your APIs against your services

Install

## Run natively on Kubernetes

100% Kubernetes-native architecture and interfaces let you take full advantage of the power of Kubernetes.

- Configure Kong Gateway the same way as Kubernetes with Kong Ingress Controller.
- Implement traffic management, transformations, and observability across Kubernetes clusters with zero downtime.
